Whether you accidentally formatted your drive, deleted a folder, or got wrecked by a virus, this program can reunite you with your data. It connects to a powerful recovery server and uses artificial intelligence to compare your scenario to previous data recovery sessions. It can find the disappearing data from Jaz disks, Zip disks, and digital camera media as well as from a hard drive. Note: The program is free, but there is a charge for the use of the data recovery server. Costs vary with amount of data to be recovered.
